

## Guess Who Maths Style

The rules are the same as the normal Guess Who game just using different cards (card template on separate sheet) and that you are trying to describe your number without giving too much away.

Write any number/numbers you like on the blank cards and then slot in front of your Guess Who face cards.

E.G. You may have the number 35. You can ask questions like:

- Does your number have any tens?
  - Is your number even?
  - Is it in the 5x tables?

To make the game harder you could then introduce hundreds and thousands.
